

Detect minor flaws in rail before they become major problems

Derailments are dangerous, destructive and costly. Minute, internal flaws in rail, invisible to the naked eye, can result in sudden, catastrophic failure. Nordco Rail Services detects unseen defects using the most sophisticated technology available, giving you an opportunity to correct them before they turn into a disaster.

Nordco Rail Services

Service From the Ground Up

The Nordco family of companies offers an extensive selection of products and services that help the railroad industry keep its trains running safely, efficiently and on time. For more than 80 years, Nordco has earned the reputation for providing exceptional customer service while delivering innovative and reliable products.

Rail Services
Powered by Dapco Technology

Our customers understand the value of rail flaw detection

Every defect found by a Nordco Rail Services detector car represents one less potential service failure and derailment. Our rail flaw detection service offers significant cost-savings and operational efficiencies, giving you the ability to identify and correct minor defects before they become more serious and costly problems.

Patented Gauge Wheel Technology detects the hard-to-find defects

Nordco Rail Services is the first company able to find detail fractures in the gauge corner of the rail and the subsurface shells that are the genesis of these defects. Our exclusive state-of-the-art rail flaw detection technology gives us the ability to locate these previously undetectable critical defects.

The proof is in the results

Nordco Rail Services trucks equipped with Gauge Wheel Technology are finding an average of 30% more defects.

Nordco Rail Services is powered by Dapco Technology, offering the most advanced rail flaw detection capabilities in the railroad industry. Pictured is a Dapco Ultrasonic Rail Inspection Wheel Probe.

Examples of Detail Fractures found by Nordco Rail Services Detector Cars

The transverse component in these fractured rail samples would have been undetectable without Nordco Rail Services Gauge Wheel Technology.
